How are men responding to feminism? In particular, at work dealing with the challenge to their power and privilege represented by positive action for sex equality? The 1980s saw many organizations, from major companies to left-wing local councils, take action to improve women's chances. The research on which this book is based evaluates the part of men in the equality process. The author demonstrates the social mechanisms through which women's aspirations for change are thwarted and draws lessons from experience for feminist activism in organizations in the 1990s.

The proceedings of the international conference "SMSEC2014", a joint conference of the first "Social Modeling and Simulations" and the 10th "Econophysics Colloquium", held in Kobe in November 2014 with 174 participants, are gathered herein. Cutting edge scientific researches on various social phenomena are reviewed. New methods for analysis of big data such as financial markets, automobile traffics, epidemic spreading, world-trades and social media communications are provided to clarify complex interaction and distributions underlying in these social phenomena. Robustness and fragility of social systems are discussed based on agent models and complex network models. Techniques about high performance computers are introduced for simulation of complicated social phenomena. Readers will feel the researchers minds that deep and quantitative understanding will make it possible to realize comprehensive simulations of our whole society in the near future, which will contribute to wide fields of industry also to scientific policy decision.

Jo B. Paoletti's journey through the history of children's clothing began when she posed the question, "When did we start dressing girls in pink and boys in blue?" To uncover the answer, she looks at advertising, catalogs, dolls, baby books, mommy blogs and discussion forums, and other popular media to examine the surprising shifts in attitudes toward color as a mark of gender in American children's clothing. She chronicles the decline of the white dress for both boys and girls, the introduction of rompers in the early 20th century, the gendering of pink and blue, the resurgence of unisex fashions, and the origins of today's highly gender-specific baby and toddler clothing.

During the 1990s, infrastructure concessions were hailed as the solution to Latin America's endemic infrastructure deficit, by combining private sector efficiency with rent dissipation brought about by competition. This publication examines the design and implementation of over 1,000 examples of concession contracts, in order to identify the problems that have occurred in the process. It goes on to highlight lessons to be learned for the future, in order to realise the potential benefits of infrastructure reform and to contribute to economic growth and poverty reduction.

Millions of Americans use e-cigarettes. Despite their popularity, little is known

about their health effects. Some suggest that e-cigarettes likely confer lower risk compared to combustible tobacco cigarettes, because they do not expose users to toxicants produced through combustion. Proponents of e-cigarette use also tout the potential benefits of e-cigarettes as devices that could help combustible tobacco cigarette smokers to quit and thereby reduce tobacco-related health risks. Others are concerned about the exposure to potentially toxic substances contained in e-cigarette emissions, especially in individuals who have never used tobacco products such as youth and young adults. Given their relatively recent introduction, there has been little time for a scientific body of evidence to develop on the health effects of e-cigarettes. Public Health Consequences of E-Cigarettes reviews and critically assesses the state of the emerging evidence about e-cigarettes and health. This report makes recommendations for the improvement of this research and highlights gaps that are a priority for future research.
