Cases on Consumer-Centric Marketing Management

Inhaltsangabe: Abstract: Traditional management accounting systems are limited in their ability to provide profitability information relevant to management decisions. The problems of inadequate profitability measurement are intensified by the increasing competition in today's international market and the customer sophistication in locating low-cost providers. In response a number of manufacturers and service companies are experimenting with new methods to analyse their profits. The collection and analysis of information on the customer profitability analysis enables management to identify their most attractive customer groups and support them with their scarce resources, turning loss-

making making accounts into profitable ones. The project investigate both the theoretical approach of customer profitability analysis and its usage in practice, today. Relevant data was collected by means of a survey and three case studies. The survey provided information about the extent of knowledge of member of organisations about customer profitability analysis and the use of it in the decision making process. The interviews added deeper knowledge about the application of customer profitability analysis in practice and helped to find new insights to this analysis method.

An insider's look at security analysis and business valuation, as practiced by Wall Street, Corporate America, and international businesses Two major market crashes, numerous financial and accounting scandals, growth in private equity and hedge funds, Sarbanes Oxley and related regulations, and international developments changed security analysis and business valuation substantially over the last fourteen years. These events necessitated a second edition of this modern classic, praised earlier by Barron's as a "welcome successor to Graham and Dodd" and used in the global CFA exam. This authoritative book shows the rational, rigorous analysis is still the most successful way to evaluate securities. It picks up where Graham and Dodd's bestselling Security Analysis - for decades considered the definitive word on the subject - leaves off. Providing a practical viewpoint, Security Analysis on Wall Street shows how the values of common stock are really determined in today's marketplace. Incorporating dozens of real-world examples, and spotlighting many special analysis cases - including cash flow stocks, unusual industries and distressed securities - this comprehensive resources delivers all the answers to your questions about security analysis and corporate valuation on Wall Street. The Second Edition of Security Analysis on Wall Street examines how mutual funds, private equity funds, hedge funds, institutional money managers,

investment banks, business appraisers, and corporate acquirers perform their craft of security analysis and business valuation in today's highly charged environment. Completely updated to reflect the latest methodologies, this reliable resource represents the most comprehensive book written by someone who has actually worked as an investment banker, private equity executive, and international institutional investor. Shows the methodical process that practitioners use to value common stocks and operating companies and to make buy/sell decisions Discusses the impact of the two stock market crashes, the accounting and financial scandals, and the new regulations on the evaluation process Covers how Internet and computing power automate portions of the research and analytical effort Includes new case study examples representative of valuation issues faced daily by mutual funds, private equity funds, hedge funds, institutional investors, investment banks, business appraisers, and corporate acquirers Is a perfect tool for professors wishing to show their MBA students the essential tools of equity and business valuation Security analysis and business valuation are core financial disciplines for Wall Streeters, corporate acquirers, and international investors. The Second Edition of Security Analysis on Wall Street is an important book for anyone who needs a solid grounding in these critical finance topics.

Customer Profitability Analysis - Today

Financial management practices are likely to have a marked effect on the financial performance of a corporate enterprise. Therefore, sound financial decisions/practices can contribute towards meeting the desired objective of having profitable operations. This subject assumes paramount significance in view of the present dynamic and turbulent business environment, which has produced more intense competition and smaller profit margins across the world. In this context, the financial management practices of the corporates in India, a country with a vast potential for economic growth, can offer valuable insights. The present study explores whether there has been a major change in the financial performance (measured in terms of profitability) and financial policies/decisions of the sample companies over a fixed period (2000-2001 to 2010-2011), with a special focus on pre and post-recession analysis. It delves deeper into current research areas such as zero working capital, real options in capital budgeting, pecking order in capital structures, and clause 49 as reflected in the financial management decisions of sample companies, and provides a broader perspective by identifying trends (if

any) in certain aspects of financial decision-making over the past two decades. A comprehensive study, covering all the major aspects of financial management practices, also contains an inter-sectoral study (among the sample companies) and develops an index of professionalism in financial management based on the practices of the sample companies. The book is primarily targeted at teachers/students of finance, management, commerce, accounting and related professional disciplines/fields. Practitioners/professionals will find it an invaluable text that helps guide them to better decision-making.

Inhaltsangabe:Introduction: The credit crunch and the subsequent global financial crisis in 2007 shattered the trust among private as well as corporate investors. Keeping in mind that the majority of corporate capital in the UK is raised through equity provided by private as well as institutional shareholders, even the whole national economy began to tumble. How long will the recession last, what impact will it have on the real economy and is there a chance for businesses to recover and most importantly rebuilt trust among the banking sector were the questions that not only managers and chief executive officers but especially shareholders had to face. Now, four years after the genesis of the financial crisis, the trust in the markets has not been completely re-established. The question arises what shareholder wealth dedication can expect from a company in the UK market environment. This study focuses on corporate performance and the deriving degree of shareholder value by analysing three business sectors whereby for each

industry sector two representative stock listed companies for a shareholder value analysis were selected: 1) The IT and Communication sector Represented by: Vodafone Group Plc and British Telecom Group Plc 2) The Oil industry Represented by: Royal Dutch Shell Plc and British Petroleum Plc 3) The Banking sector Represented by: Royal Bank of Scotland Plc and Barclays Plc The author applied the following six financial models as indicators of a shareholder value orientated business-running including: 1) Price/ Earnings Ratio 2) Discounted Cash Flow Model 3) Dividend Valuation Model 4) Economic Value Added 5) Market Capitalization 6) Capital Asset Pricing Model Those models have been evaluated in accordance to their practical relevance in the real world and in respect to their informative value when it comes to estimating financial performance under the premise of shareholder value creation. The European Symposium on Computer Aided Process Engineering (ESCAPE) series presents the latest innovations and achievements of leading professionals from the industrial and academic communities. The ESCAPE series serves as a forum for engineers, scientists, researchers, managers and students to present and discuss progress being made in the area of Computer Aided Process Engineering (CAPE). European industries large and small are bringing innovations into our lives, whether in the form of new technologies to address environmental problems, new products to make our homes more comfortable and energy efficient or new therapies to improve the health and well-being of European citizens. Moreover, the European Industry needs to undertake research and technological initiatives in response to humanity's "Grand Challenges", described in the declaration of Lund, namely, Global Warming, Tightening Supplies of Energy, Water and Food, Ageing Societies, Public Health, Pandemics and Security. Thus, the Technical Theme of ESCAPE 21 will be "Process Systems Approaches for Addressing Grand Challenges in Energy, Environment, Health, Bioprocessing & Nanotechnologies".
