Cancer Pain Management

Now, more than ever, Family Medicine is alive and well in the United States. The base of this medical specialty has traditionally been in the smaller cities, suburban communities, and rural areas of this country. Over the past decade, however, there has been a resurgence of interest in primary care in our major metropolitan areas as a solution to the high tech subspecialty pace of the tertiary care environment. A rebirth of urban family medicine has accompanied these pioneering efforts. To date, the accomplishments are substantial and the prospects are bright. There is still a long way to go and there are a significant number of hurdles to cross. Although diseases are generally the same wherever you are, their effects as illness on the individual and the family are strongly influenced by the environment and social milieu. Urban families have distinctive and diverse problems-cultural, economic, and ethnic. Training programs situated in the large cities must recognize these issues and include special emphasis on the situations that the family physician is likely to encounter during and after his training. There is very little research literature on the background and nature of special urban problems and these areas are the subject of several chapters of this long overdue volume

The Institute of Medicine study *Crossing the Quality Chasm* (2001) recommended that an interdisciplinary summit be held to further reform of health professions education in order to enhance quality and patient safety. *Health Professions Education: A Bridge to Quality* is the follow up to that summit, held in June 2002, where 150 participants across disciplines and occupations developed ideas about how to integrate a core set of competencies into health professions education. These core competencies include patient-centered care, interdisciplinary teams, evidence-based practice, quality improvement, and informatics. This book recommends a mix of approaches to health education improvement, including those related to oversight processes, the training environment, research, public reporting, and leadership. Educators, administrators, and health professionals can use this book to help achieve an approach to education that better prepares clinicians to meet both the needs of patients and the requirements of a changing health care system.

Cancer care today often provides state-of-the-science biomedical treatment, but

Read Free Accreditation Of Patient Family Education Pfe In The

fails to address the psychological and social (psychosocial) problems associated with the illness. This failure can compromise the effectiveness of health care and thereby adversely affect the health of cancer patients. Psychological and social problems created or exacerbated by cancer--including depression and other emotional problems; lack of information or skills needed to manage the illness; lack of transportation or other resources; and disruptions in work, school, and family life--cause additional suffering, weaken adherence to prescribed treatments, and threaten patients' return to health. Today, it is not possible to deliver high-quality cancer care without using existing approaches, tools, and resources to address patients' psychosocial health needs. All patients with cancer and their families should expect and receive cancer care that ensures the provision of appropriate psychosocial health services. Cancer Care for the Whole Patient recommends actions that oncology providers, health policy makers, educators, health insurers, health planners, researchers and research sponsors, and consumer advocates should undertake to ensure that this standard is met.

Improving the culture of safety in our health care institutions is an essential component of preventing or reducing errors as well as improving overall health care quality. This book presents the clinically tested Myer's Patient Safety Model for health care system leaders, middle managers, and administrators to build their patient safety program and to help sustain, renew, or obtain accreditation. The author provides detailed explanations of why medical errors still occur in accredited hospitals, and provides the much needed organization-wide steps to prevent these errors and enhance patient safety for improved outcomes. Current patient safety challenges are discussed with an emphasis on the concept of reliability. The Myers Model is examined in detail, along with current evidence for its three interrelated levels of organizational structure-the leadership (system) level, the unit (microsystem) level, and the individual level. Working with the families of inpatients is one of the most importantâ€”and most challengingâ€”aspects of practicing clinical psychiatry. Drury offer a step-

by-step guide to developing the skills needed to work successfully with patients' families. Research data, outlined in the opening chapters, demonstrate just how essential families and evidence-based family treatment are to effective patient care. Succeeding chapters use clinical case studies to illustrate the skills necessary for the assessment and treatment of the family. Psychiatric residents will enhance their knowledge of the family as a part of the patient's social context and learn how to conduct a family meeting, common mistakes to avoid, and when to refer the family for other assistance. The authors also describe specific strategies for intervening with difficult families and for overcoming some of the fears and anxieties common among residents when they interact with patients' families. The authors provide valuable insights into the perspectives of families and patients and offer practical suggestions for risk management after the patient is discharged from inpatient care. Keyed to the requirements articulated by the American College of Graduate Medical Education, this handbook is a tool no psychiatric resident can do without.

The Future of Nursing

Read Free Accreditation Of Patient Family Education Pfe In The

The Future of Nursing explores how nurses' roles, responsibilities, and education should change significantly to meet the increased demand for care that will be created by health care reform and to advance improvements in America's increasingly complex health system. At more than 3 million in number, nurses make up the single largest segment of the health care work force. They also spend the greatest amount of time in delivering patient care as a profession. Nurses therefore have valuable insights and unique abilities to contribute as partners with other health care professionals in improving the quality and safety of care as envisioned in the Affordable Care Act (ACA) enacted this year. Nurses should be fully engaged with other health professionals and assume leadership roles in redesigning care in the United States. To ensure its members are well-prepared, the profession should institute residency training for nurses, increase the percentage of nurses who attain a bachelor's degree to 80 percent by 2020, and double the number who pursue doctorates. Furthermore, regulatory and institutional obstacles -- including limits on nurses' scope of practice -- should be removed so that the health system can reap the full benefit of nurses' training, skills, and knowledge in patient care. In this book, the Institute of Medicine makes recommendations for an action-oriented blueprint for the future of nursing.

Is the accreditation system “broken” as claimed by successive Secretaries of Education and some recent reports? This book addresses this question head-on, asking whether accreditation is indeed in need of radical reform, and whether the agencies’ authority should be curtailed; or whether in fact the changes now underway – that accrediting agencies contend ensure rigorous and consistent standards and degrees that are a reliable gauge of student attainment – are moving the academy and the nation in the right direction. In a sweeping and ambitious book, Paul Gaston deploys his knowledge and experience as a peer reviewer for three regional accrediting agencies, a former board member and chair of the Association of Specialized and Professional Accreditors, and his involvement in the early stages of the Council for Higher Education Accreditation, to go beyond

the polemics to explore whether a strategy that builds on the emerging values and good practices can achieve the substantive and positive improvements the public is demanding. As an introduction for readers new to the debate, he provides a brief overview of the development of accreditation, its terminology, and structure, describing how it currently works, and what it has achieved; and offers insight into the proliferation of the missions of accreditation – as well as the multiplicity of stakeholders with an interest in its outcomes – to question whether the mandate of accreditation should, as some contend, be expanded, or particular missions reassigned or abandoned. This established, he undertakes a dispassionate analysis of the arguments and recommendations of critics and supporters of the current direction of accreditation to identify common ground and explore constructive ways forward, paying specific attention to current and potential reforms of the three sectors of higher education accreditation: the seven regional accrediting associations, the national accreditors, and programmatic, or “specialized” accreditation. The book concludes by outlining a comprehensive approach to reform. His proposal would preserve practices that already work well while advancing important changes that can be incrementally implemented. The result would be a higher education accreditation structure more cost effective, more efficient, more transparent and accountable, and more responsive to institutional and public needs.

Although epilepsy is one of the nation's most common neurological disorders, public understanding of it is limited. Many people do not know the causes of epilepsy or what they should do if they see someone having a seizure. Epilepsy is a complex spectrum of disorders that affects an estimated 2.2 million Americans in a variety of ways, and is characterized by unpredictable seizures that differ in type, cause, and severity. Yet living with epilepsy is about much more than just seizures; the disorder is often defined in practical terms, such as challenges in school, uncertainties about social situations and employment, limitations on driving, and questions about independent living. The Institute of Medicine was asked to examine the public health dimensions of the epilepsies, focusing on public health surveillance and data collection; population and public health research; health policy, health care, and human services; and education for people with the disorder and their families, health care providers, and the public. In *Epilepsy Across the Spectrum*, the IOM makes recommendations ranging from the expansion of collaborative epilepsy surveillance efforts, to the coordination of public awareness efforts, to the engagement of people with epilepsy and their families in education, dissemination, and advocacy for improved care and services. Taking action across multiple dimensions will improve the lives of people with epilepsy and their families. The realistic, feasible, and action-oriented recommendations in this report can help enable short- and long-term improvements for people with epilepsy. For all epilepsy organizations and advocates, local, state, and federal agencies, researchers, health care professionals, people with epilepsy, as well as the public,

Epilepsy Across the Spectrum is an essential resource.
