The Future of the Internet--And How to Stop It

The Law and Policy of Ecosystem Services is the first comprehensive exploration of the status and future of natural capital and ecosystem services in American law and policy. The book develops a framework for thinking about ecosystem services across their ecologic, geographic, economic, social, and legal dimensions and evaluates the prospects of crafting a legal infrastructure that can help build an ecosystem service economy that is as robust as existing economies for manufactured goods, natural resource commodities, and human-provided services. The book examines the geographic, ecological, and economic context of ecosystem services and provides a baseline of the current status of ecosystem services in law and society. It identifies shortcomings of current law and policy and the critical areas for improvement and forges an approach for the design of new law and policy for ecosystem services. Included are a series of nine empirical case studies that

explore the problems caused by society's failure to properly value natural capital. Among the case study topics considered are water issues, The Conservation Reserve Program, the National Conservation Buffer Initiative, the agricultural policy of the European Union, wetland mitigation, and pollution trading. The Law and Policy of Ecosystem Services is a groundbreaking look at the question of whether and how law and policy can shape a sustainable system of ecosystem service management. It is an accessible and informative work for faculty, students, and policy makers concerned with ecology, economics, geography, political science, environmental studies, law, and related fields.

Will innovators be forced to seek the blessing of public officials before they develop and deploy new devices and services, or will they be generally left free to experiment with new technologies and business models? In this book, Adam Thierer argues that if the former disposition, "the precautionary principle," trumps the latter, "permissionless innovation," the result will be fewer services, lower-quality goods, higher prices, diminished economic growth, and a decline in the overall standard of living. When public policy is shaped by "precautionary principle" reasoning, it poses a serious threat to technological progress, economic entrepreneurialism, and long-run prosperity. By contrast, permissionless innovation has fueled the success of the Internet and much of the modern tech economy in recent years, and it is set to power the next great industrial revolution—if we let it.

"BLOOD AND EARTH is a gripping account of the deadly link between slavery and environmental destruction. Kevin Bales is a social scientist, human rights activist, and journalist -- and he's also one of the world's leading experts on modern slavery. In his work he began to notice the connection between environmental decline and slavery: the two almost always went hand-in-hand, whether in the hellish gold mines of Ghana or the miraculously beautiful mangrove forests of Bangladesh. But why? He set off to find the answer on a fascinating and moving journey that took him into the lives of modern day slaves and along a supply chain that leads directly to the cell phones in our pockets. He found solutions that redeemed both the lives of the slaves in the world's most threatened places and the environments they live in. This is a clear-eyed, inspiring, and profoundly hopeful book that brings us dramatic stories from the world's environmental and human rights hotspots and offers solutions to our most pressing crises"--

This book explains curriculum audits and how to conduct them. Chapter I, "Why Audit?" presents criteria for determining if an audit is warranted and describes three basic types: functional, operational, and programmatic. Chapter II shows how the three primary activities of document review, interviews, and site visitations yield answers to the questions inherent in each audit standard. Chapter III discusses writing the audit and provides guidelines in creating the final document, including the use of photographs. Chapter IV is an expose of the hidden curriculum, as revealed through still photographs. Chapters V through VIII present a series of case studies (with names changed to protect the districts involved) of audits conducted between 1986 and 1987. The purpose of the case studies is to demonstrate how data are used and to illustrate some of the shortcomings of the audit. Chapter IX discusses pre- and post-audit activities as linkages that connect the audit to practice and to change, and Chapter X addresses the working assumptions of the audit in a nonrational school system. Appended are (1) an annotated bibliography entitled "The Essential Curriculum Audit Reader"; (2) a survey instrument on good curriculum management practices; and (3) a sample board policy to establish curricular control. An index and bibliography are included. (TE)

The REGTECH Book

First released in the Spring of 1999, How People Learn has been expanded to show how the theories and insights from the original book can translate into actions and practice, now making a real connection between classroom activities and learning behavior. This edition includes far-reaching suggestions for research that could increase the impact that classroom teaching has on actual learning. Like the original edition, this book offers exciting new research about the mind and the brain that provides answers to a number of compelling questions. When do infants begin to learn? How do experts learn and how is this different from non-experts? What can teachers and schools do-with curricula, classroom settings, and teaching methods--to help children learn most effectively? New evidence from many branches of science has significantly added to our understanding of what it means to know, from the neural processes that occur during learning to the influence of culture on what people see and absorb. How People Learn examines these findings and their implications for what we teach, how we teach it, and how we assess what our children learn. The book uses exemplary teaching to illustrate how approaches based on what we now know result in in-depth learning. This new knowledge calls into question concepts and practices firmly entrenched in our current education system. Topics include: How learning actually changes the physical structure of the brain. How existing knowledge affects what people notice and how they learn. What the thought processes of experts tell us about how to teach. The amazing learning potential of infants. The relationship of classroom learning and everyday settings of community and workplace. Learning needs and opportunities for teachers. A realistic look at the role of technology in education.

Creative Problem Solving for Managers

Which is more dangerous, a gun or a swimming pool? What do schoolteachers and sumo wrestlers have in common? How much do parents really matter? These may not sound like typical questions for an economist to ask. But Steven D. Levitt is not a typical economist. He studies the riddles of everyday life--from cheating and crime to parenting and sports--and reaches conclusions that turn conventional wisdom on its head. Freakonomics is a groundbreaking collaboration between Levitt and Stephen J. Dubner, an award-winning author and journalist. They set out to explore the inner workings of a crack gang, the truth about real estate agents, the secrets of the Ku Klux Klan, and much more. Through forceful storytelling and wry insight, they show that economics is, at root, the study of incentives--how people get what they want or need, especially when other people want or need the same thing.

Auditing and Assurance Services

The classic book on business strategy in the new networked economy— from the author of the New York Times bestseller The Inevitable Forget supply and demand. Forget computers. The old rules are broken. Today, communication, not computation, drives change. We are rushing into a world where connectivity is everything, and where old business know-how means nothing. In this new economic order, success flows primarily from understanding networks, and networks have their own rules. In New Rules for the New Economy, Kelly presents ten fundamental principles of the connected economy that invert the traditional wisdom of the industrial world. Succinct and memorable, New Rules explains why these powerful laws are already hardwired into the new economy, and how they play out in all kinds of business—both low and high tech— all over the world. More than an overview of new economic principles, it prescribes clear and specific strategies for success in the network economy. For any worker, CEO, or middle manager, New Rules is the survival kit for the new economy.

Permissionless Innovation: The Continuing Case for Comprehensive Technological Freedom

Every day, billions of photographs, news stories, songs, X-rays, TV shows, phone calls, and emails are being scattered around the world as sequences of zeroes and ones: bits. We can't escape this explosion of digital information and few of us want to-the benefits are too seductive. The technology has enabled unprecedented innovation, collaboration, entertainment, and democratic participation. But the same engineering marvels are shattering centuries-old assumptions about privacy, identity, free expression, and personal control as more and more details of our lives are captured as digital data. Can you control who sees all that personal information about you? Can email be truly confidential, when nothing seems to be private? Shouldn't the Internet be censored the way radio and TV are? is it really a federal crime to download

music? When you use Google or Yahoo! to search for something, how do they decide which sites to show you? Do you still have free speech in the digital world? Do you have a voice in shaping government or corporate policies about any of this? Blown to Bits offers provocative answers to these questions and tells intriguing real-life stories. This book is a wake-up call To The human consequences of the digital explosion.

Peach Blossom Cologne Company with CD

This extraordinary book explains the engine that has catapulted the Internet from backwater to ubiquity—and reveals that it is sputtering precisely because of its runaway success. With the unwitting help of its users, the generative Internet is on a path to a lockdown, ending its cycle of innovation—and facilitating unsettling new kinds of control. IPods, iPhones, Xboxes, and TiVos represent the first wave of Internet-centered products that can't be easily modified by anyone except their vendors or selected partners. These "tethered appliances" have already been used in remarkable but little-known ways: car GPS systems have been reconfigured at the demand of law enforcement to eavesdrop on the occupants at all times, and digital video recorders have been ordered to self-destruct thanks to a lawsuit against the manufacturer thousands of miles away. New Web 2.0 platforms like Google mash-ups and Facebook are rightly touted—but their applications can be similarly monitored and eliminated from a central source. As tethered appliances and applications eclipse the PC, the very nature of the Internet—its "generativity," or innovative character—is at risk. The Internet's current trajectory is one of lost opportunity. Its salvation, Zittrain argues, lies in the hands of its millions of users. Drawing on generative technologies like Wikipedia that have so far survived their own successes, this book shows how to develop new technologies and social structures that allow users to work creatively and collaboratively, participate in solutions, and become true "netizens."

Slips, trips and falls are a chronic health problem in the US and around the world. Fall injuries are the number one cause of

emergency room visits and the fourteenth leading cause of death in the US. The average person is 7 times more likely to die from a fall than from the flu and 3 times more likely to die from a fall than by a firearm. Since 1999, we have reduced deaths from heart disease 15%. Deaths caused by auto accidents are down 12%. But during that same time period deaths from falls have increased over 150%. Both injuries and deaths caused by falls are at record highs and the problem continues to grow. We've learned how to fix the human heart and we have made driving safer. Now is the time to focus on preventing fall injuries. The good news is that fall injuries are preventable. Everyone falls, but falls don't just happen, they're preceded by other events. When you eliminate those events, you reduce the risk of falling. Stop the Slip shows how you can avoid these injuries. Following the simple five step A-L-E-R-T System(TM) discussed in the book you will reduce your risk of falling. Thom Disch provides an entertaining and engaging look at: Why we fall; where we fall; the business side of falls; and most importantly how we can prevent and avoid fall injuries. The book is a comprehensive mix of research on the topic of falls and fall injuries mixed with real world stories and experiences about falls and their consequences. As you read this book you'll also discover many interesting and surprising facts. For example: -Fall injuries are not just a problem for the elderly. 75% of all fall injuries happen to people under the age of 68. -The annual economic impact of fall injuries in the US exceeds $150 billion, or more than 1% of our gross domestic product. -Falls are the number one cause of traumatic brain injuries. -Winter weather appears to be a much smaller cause of fall deaths than you might expect. -Falls cause nearly 4 times more emergency room visits than auto accidents. This is a topic that affects everyone. Reading this book is the first step to making your family and friends safer.
