This publication provides an overview of the importing process and contains general information about import requirements. This edition contains much new and revised material brought about because of changes in the law, particularly the Customs Modernization Act. The Customs modernization provisions has fundamentally altered the process by shifting to the importer the legal responsibility for declaring the value, classification, and rate of duty applicable to

entered merchandise. Chapters cover entry of goods, informed compliance, invoices, assessment of duty, classification and value, marking, special requirements for alcoholic beverages, motor vehicles and boats, import quotas, fraud, and foreign trade zones. In addition to the material provided by the U. S. Customs Service, the private commercial publisher of this book has provided a bonus chapter on how to build a tax-free import-export business.

The first reference book to provide a detailed account of the Pyroceram(R) cookware, developed at Corning by Donald Stookey and marketed in 1958. This special Pyroceram(R) material was first used on military missile nose cones, and because of its durability, it was felt to be a great medium for the kitchen, too. Easily taken from the freezer, used in the oven, microwave, or on the range, it was beautiful enough to be served at the table. After a meal, it went straight to the dishwasher. The cookware saved many steps for the consumer. 60 plus patterns are listed and shown in over 400 colour photographs. Reprints of catalogues, brochures, and historical material, and a detailed bibliography provide much additional information. All information was carefully compiled from original catalogues and reprints, company brochures, trade journals, company advertising, auction lists, eBay, and the shared extensive experience of many dedicated dealers and collectors. An index gives easy access to material.

Imagine a world where supply no longer equals demand. A world where a company craving greater market share gives away its most valuable product -- and generates millions of dollars. A world where the company that boasts the greatest chunk of consumer demand experiences even more demand; where the antagonistic relationship between buyer and seller has been replaced with a cooperative, knowledge-based exchange; where companies in every industry think like futurists, personalize products and services regardless of cost, target individuals rather than blanket the masses, and renovate old products instead of just creating new ones.

In the past few years, interest in plug-in electric vehicles (PEVs) has grown. Advances in battery and other technologies, new federal standards for carbon-dioxide emissions and fuel economy, state zero-emission-vehicle requirements, and the current administration's goal of putting millions of alternative-fuel vehicles on the road have all highlighted PEVs as a transportation alternative. Consumers are also beginning to recognize the advantages of PEVs over conventional vehicles, such as lower operating costs, smoother operation, and better acceleration; the ability to fuel up at home; and zero tailpipe emissions when the vehicle operates solely on its battery. There are, however, barriers to PEV deployment, including the vehicle cost, the short all-electric driving range, the long battery charging time, uncertainties about battery life, the few choices of vehicle models, and the need for a charging infrastructure to support PEVs. What should industry do to improve the performance of PEVs and make them more attractive to consumers? At the request of Congress, *Overcoming Barriers to Deployment of Plug-in Electric Vehicles* identifies barriers to the introduction of electric vehicles and recommends ways to mitigate these barriers. This report examines the characteristics and capabilities of electric vehicle technologies, such as cost, performance, range, safety, and durability, and assesses how these factors might create barriers to

widespread deployment. *Overcoming Barriers to Deployment of Plug-in Electric Vehicles* provides an overview of the current status of PEVs and makes recommendations to spur the industry and increase the attractiveness of this promising technology for consumers. Through consideration of consumer behaviors, tax incentives, business models, incentive programs, and infrastructure needs, this book studies the state of the industry and makes recommendations to further its development and acceptance.
