Physical-chemical treatment systems can be incorporated into the process line of an industry or may be used to enhance an existing treatment system. The more consistent effluent quality from physical-chemical treatment systems makes them amenable to byproduct recovery or water reuse schemes. While many such systems are more expensive than conventional treatment, the prospect of valuable byproduct recovery makes them more attractive. The objective of this manual is to provide a comprehensive review of physical-chemical and advanced treatment technologies and their application to the food industry. Such documentation should provide food industry personnel with valuable information on treatment alternatives to meet their specific needs. A general section covering the economic considerations is included to augment the design criteria. Case histories from the majority of the food industry have been included to add operational information.
