The Sociology of Urban Life

Dissertation Abstracts International

Not long ago, the future seemed predictable. Now, certainty about the course of civilization has given way to fear and doubt. Raging fires, ravaging storms, political upheavals, financial collapse, and deadly pandemics lie ahead—or are already here. The world feels less comprehensible and more dangerous, and no one, from individuals to businesses and governments, knows how to navigate the path forward. Ruth DeFries argues that a surprising set of time-tested strategies from the natural world can help humanity weather these crises. Through trial and error over the eons, life has evolved astonishing and counterintuitive tricks in order to survive. DeFries details how a handful of fundamental strategies—investments in diversity, redundancy over efficiency, self-correcting feedbacks, and decisions based on bottom-up knowledge—enable life to persist through unpredictable, sudden shocks. Lessons for supply chains from a leaf’s intricate network of veins and stock market-saving “circuit breakers” patterned on planetary cycles reveal the power of these approaches for modern life. With humility and willingness to apply nature’s experience to our human-constructed world, DeFries demonstrates,

we can withstand uncertain and perilous times. Exploring the lessons that life on Earth can teach us about coping with complexity, *What Would Nature Do?* offers timely options for civilization to reorganize for a safe and prosperous future.

Survey of Social Science: Social stratification: functionalist perspectives

The eBook Science Guide for NTSE Class 10 Stage 1 & 2 is empowered with the inclusion of 2018 Stage I questions of the different states. The book is based on the syllabus of Class 8, 9 & 10 as prescribed by NCERT. The book also comprises of Past questions of NTSE Stage 1 & 2 from the years 2012-2018. • The book has been divided into 4 sections comprising of 32 chapters - History (9), Political Science (9), Geography (9) & Economics (5). • The book provides sufficient pointwise theory, solved examples followed by Fully Solved exercises in 2 levels - State/ UT level & National level. • Maps, Diagrams and Tables to stimulate the thinking ability of the student. • The book covers new variety of questions - Passage Based, Assertion-Reason, Matching, Definition based, Statement based, Feature Based, Diagram Based and Integer Answer Questions.

Handbook of Contemporary Urban Life

Student-active Science

A globe-trotting, eye-opening exploration of how cities can—and do—make us happier people Charles Montgomery's *Happy City* will revolutionize the way we think about urban life. After decades of unchecked sprawl, more people than ever are moving back to the city. Dense urban living has been prescribed as a panacea for the environmental and resource crises of our time. But is it better or worse for our happiness? Are subways, sidewalks, and tower dwelling an improvement on the car-dependence of sprawl? The award-winning journalist Charles Montgomery finds answers to such questions at the intersection between urban design and the emerging science of happiness, and during an exhilarating journey through some of the world's most dynamic cities. He meets the visionary mayor who introduced a "sexy" lipstick-red bus to ease status anxiety in Bogotá; the architect who brought the lessons of medieval Tuscan hill towns to modern-day New York City; the activist who turned Paris's urban freeways into beaches; and an army of American

suburbanites who have transformed their lives by hacking the design of their streets and neighborhoods. Full of rich historical detail and new insights from psychologists and Montgomery's own urban experiments, *Happy City* is an essential tool for understanding and improving our own communities. The message is as surprising as it is hopeful: by retrofitting our cities for happiness, we can tackle the urgent challenges of our age. The happy city, the green city, and the low-carbon city are the same place, and we can all help build it.

Experiences in a Promised Land

The Bulletin of the Atomic Scientists is the premier public resource on scientific and technological developments that impact global security. Founded by Manhattan Project Scientists, the Bulletin's iconic "Doomsday Clock" stimulates solutions for a safer world.

Political Science Review

What Would Nature Do?

This volume emerged from an NSF sponsored conference on Inquiry Approaches to Science Teaching held at Hampshire College in June, 1996. STUDENT-ACTIVE SCIENCE emphasizes that experiencing the process of science is central to the learning of science. This book is a collection of articles, ideas, and models for science education reform and is the result of collaboration between instructors frustrated with the traditional approach to teaching. You'll find models and ideas that promote critical thinking and hands-on science in the classroom, as well as commentary from school-wide, department-wide and individual reform efforts.

Happy City: Transforming Our Lives Through Urban Design

The Pacific Northwest, like many other regions of the United States, has been touted as the Promised Land. As early as the 1830s, "Oregon fever" brought missionaries, promoters, speculators, politicians, and settlers to the nation's far West. Spared the ravages of the Civil War and the scars of rapid northern industrialization, the region continued to offer Golden Opportunity. Its promise encompassed the bounties of sea and land, a mild and healthful climate, and an unusually homogeneous population. Practically since the turn of the century, the Northwest has been a region of paradoxes. Women, who in Washington had acquired suffrage and lost it in the 1880s, regained it and later elected a woman mayor of Seattle. Exploitation of workers, despite, or perhaps because of, abundance has been extreme-- and has engendered some of America's most radical labor movements. Both racial backlash and enlightened reforms characterize the region. Until now, no single-volume history has taken up the modern issues of women, minorities, radicalism and environment. The editors of *Experiences in the Promised Land*, G. Thomas Edwards and Carlos Schwantes, themselves teachers and writers of Northwest history, have carefully compiled a selection of essays that treats the full scope of the region's history, with a special emphasis on 20th century topics. They have gathered together the best of recent

scholarship: the work of regional authorities as well as contributions by some of the most promising of the new generation of scholars. A variety of writing styles and approaches, subjects ranging from individual biographies to studies of broad policies and movements, a chronological organization enhanced by concise, insightful chapter commentaries, and an extensive bibliography make this volume indispensable for teachers, students, and the general reader of Northwest history.

Bulletin of the Atomic Scientists

"This publication concerns large-scale urban area development in general, and in particular with gaining an understanding of the role played by global-local interaction in shaping the area development strategies in one particularly explosive urban project, the development of Shanghai's Pudong New Area. The Pudong development provides an extreme example of a situation in which interaction between global and local forces took place in a location whose boundaries had been closed to the outside world for almost forty years and in a period when doors and windows were beginning to open. The research led to a concrete interpretation of the tensions developing at district level and provided an example capable of representing the complexity and dynamics of current area developments. The practical question addressed by the research was: What were the main factors responsible for the speed achieved by the Pudong development? The associated theoretical question was: To what extent did the development of

the Pudong New Area reflect the characteristics of a developmental state?"

Planning Paris Before Haussmann

Cycling as a way of life and mode of transportation is on the rise in city after city around the world. For those looking to dip their proverbial toes into the waters of urban cycling the prospect at times can be rather intimidating. What kind of bike should I ride? A skinny-wheeled high-end road bike? A fixie? A chunky city commuter bike? A department store bike? How about fashion? Do I have to wear brightly colored skin-tight Lycra outfits? Can I just wear normal clothes? How do I lug my gear around? The Bohemian Guide to Urban Cycling takes the reader into the world and workings of cycling in the city to uncover the essentials to how to join in on the cycling revolution. Your bicycling guide on this journey is a card-carrying bohemian living in Portland. By using the bike-crazy city of Portland as the backdrop, this book covers all of the basics needed to bike comfortably in the city and to know what the heck you're talking about from bike selection to fashion to bike lanes to gentrification and more. After reading this you'll know precisely what to ride, how to ride, what to wear, and how to talk like an insider. Well, maybe not,

but it'll still be a fun journey together. But this book is more than about urban-cycling fashion and high-end bikes. It also plunges headlong into conversations about mobility, equity, race, and justice. If there is going to be a book about all-things cycling in the city it must delve into these uncomfortable topics in order to develop a more holistic view of urban cycling. The bottom line must be to affirm all kinds of people pedaling through the streets of our cities on anything that rolls.
