"Kara is a Lilliputian girl who lives with her parents in an old doll house, hidden away in the back of an old shed. Isolated her entire life, she has few Lilliputian friends her own age, and even less experience with the world around her. Everything she knows has been learned either first hand, or taught to her by her parents. But her life changes drastically when a human family moves into the house her family lives by. Will Kara make a new friend? Or is something darker, possibly more dangerous waiting there for her? 7" Kara is an ongoing watercolor children's comic. Collected in this volume are the first four chapters, a bonus story, and a selection of the concept art."--Back cover.

Dealing with information is one of the vital skills in the 21st century. It takes a fair degree of information savvy to create, represent and supply information as well as to search for and retrieve relevant knowledge. How does information (documents, pieces of knowledge) have to be organized in order to be retrievable? What role does metadata play? What are search engines on the Web, or in corporate intranets, and how do they work? How must one deal with natural language processing and tools of knowledge organization, such as thesauri, classification systems, and ontologies? How useful is social tagging? How valuable are intellectually created abstracts and automatically prepared extracts? Which empirical methods allow for user research and which for the evaluation of information systems? This Handbook is a basic work of information science, providing a comprehensive overview of the current state of information retrieval and knowledge

representation. It addresses readers from all professions and scientific disciplines, but particularly scholars, practitioners and students of Information Science, Library Science, Computer Science, Information Management, and Knowledge Management. This Handbook is a suitable reference work for Public and Academic Libraries.

Teachers are busy and often do not have time to learn new software applications. Word processing, databases, and spreadsheets can improve work efficiency, expand the range of tasks performed, improve accuracy and effectiveness, and reduce the amount of time needed to perform routine tasks. But how do teachers find the time to learn these applications? That is where this book comes in. Microsoft Office for Teachers, Third Edition presents a visually illustrated and non-technical approach to learning the Microsoft Office 2007 suite. The book includes screen-captures along with text descriptions, work templates, and exercises to help teachers learn and use these applications without frustration. Templates for newsletters, grade books, etc are provided that demonstrate the usefulness of Microsoft Office in the classroom and the diversity of its applications. Teachers can quickly and easily tailor these templates and exercises to meet their specific needs. Lastly, the book focuses on various tasks such as making a presentation to a parent group or a school

board as a catalyst for learning Microsoft Office. This book is written for teachers with very basic computing skills. Using non-technical and graphically illustrated “how-to” procedures teachers and students accomplish real-world, computer-based tasks and develop skills in word processing, database management, using spreadsheets, and making presentations.
