How to Critique Journal Articles in the Social Sciences

How do you write good research articles -- articles that are interesting, compelling, and easy to understand? How do you write papers that influence the field instead of falling into obscurity? *Write It Up* offers a practical and revealing look at how productive researchers write strong articles. The book's guiding idea is that academics should write to make an impact, not just to get something published somewhere. Your work will be more influential if you approach it reflectively and strategically. Based on his experience as an author, journal editor, and reviewer, Paul Silvia offers systematic approaches to problems like picking journals; cultivating the right tone and style; managing collaborative projects and co-authors; crafting effective Introduction, Method, Results, and Discussion sections; and submitting and resubmitting papers to journals. With its light-hearted style and practical advice, *Write It Up* will help graduate students struggling with writing their first paper, early career professors who need advice on how to write better articles, and seasoned academic writers looking to refresh their writing strategy or style.

The Social Psychology of Organizational Behavior

`A comprehensive, well-written and beautifully organized book on publishing articles in the humanities and social sciences that will help its readers write forward with a first-rate guide as good company.' - Joan Bolker, author of Writing Your Dissertation in Fifteen Minutes a Day `Humorous, direct, authentic a seamless weave of experience,

anecdote, and research.' - Kathleen McHugh, professor and director of the UCLA Center for the Study of Women Wendy Laura Belcher's *Writing Your Journal Article in Twelve Weeks: A Guide to Academic Publishing Success* is a revolutionary approach to enabling academic authors to overcome their anxieties and produce the publications that are essential to succeeding in their fields. Each week, readers learn a particular feature of strong articles and work on revising theirs accordingly. At the end of twelve weeks, they send their article to a journal. This invaluable resource is the only guide that focuses specifically on publishing humanities and social science journal articles.

Cardiovascular Medicine is a new e-book in a collection of subject-themed e-books containing relevant key articles from Medicine. The e-books provide a perfect source of revision for post-graduate exams in clinical medicine and portfolio material for life-long learning. As well as mapping to the UK Core Medical Training curriculum, these e-books also enable anyone with a short-term interest in a specific area to buy individual articles at a price-point that will give affordable access to all readers (from medical students to GPs and practitioners in related areas). The quality of user experience on mobiles, tablets and laptops will be an added bonus for learning on the move. The whole board has been involved in the creation of this content and are therefore listed as

authors on all the e-books. In addition we extend our warm thanks for their contribution to these e-books to the past Chairman Allister Vale (who stepped down from the board in 2015) and to John Mucklow, who stepped down in 2016. Derek Waller, on behalf of the Editorial Board About the journal The parent journal (www.medicinejournal.co.uk) is a rolling, continuously updated review of clinical medicine over a 4-year cycle covering all the important topics for core medical training. Its Editorial Board comprises some of Europe's most influential specialists. The journal's articles are refreshed, updated, augmented or replaced as appropriate each time the subject is due for revision to provide a concise overview of knowledge and practice core to the curriculum. Each article is written by invited experts and overseen by the relevant subject specialist on the Board. A trainee representative on the Board ensures relevance and accessibility for exam candidates. 'Shon's writing is engaging and entertaining; he opens up the "black box" of academic reading and writing, explaining how to decode and critique formal scientific writing and systematically organize information gained from reading journal articles' - Dr Lorraine Whitmarsh, School of Psychology, University of Cardiff, UK 'Once the reader has mastered Philip Shon's codes and applied them to texts, it will become increasingly impossible not to write and critique with integrity. I thoroughly recommend this book' - Professor Helen Cowie, Faculty of Health and Medical Sciences, University of Surrey, UK Many texts provide tips for successfully writing theses, dissertations, and journal articles. All argue that writing is like any other skill - it has to be developed, taught, and practiced daily. The same is certainly true of academic reading, yet many advanced students have trouble with the essential skill of 'reading critically'. This handy guide teaches you how to read so you're able to maximize your output in the writing process, whether you're a student or early career researcher. The author's unique reading code teaches you how to approach social and behavioural science journal articles as texts that can be deciphered structurally, mechanically and grammatically. The strategies included allow you to systematize the

reading, note-taking and organizing of voluminous amounts of information in an easily identifiable and retrievable format, which will be a huge confidence boost to anyone who struggles with this first phase in the writing process. This book is indispensable for social and behavioural science students and researchers worldwide wanting to sharpen their critical evaluative skills for better academic writing. ? The American Journal of the Medical Sciences

How to Critique Journal Articles in the Social Sciences, by Scott R. Harris, is a brief, introductory book that provides readers with a step-by-step guide to reading and understanding a social science research article. The author demonstrates the many strengths of social research, including its advantages over ordinary ways of knowing things, and, at the same time, points out that research is inevitably flawed. Rather than naively assuming that good research simply produces “The

Truth” or cynically asserting that research is hopelessly biased and futile, this book instills in readers a critical perspective—one that appreciates the strengths and weaknesses of any piece of scholarship.

Journal publication and grant writing are two core professional skills for new scholars today. However, systematic training is not typically offered in graduate programs worldwide. This book equips readers with the current scientific knowledge by providing a concise introduction to the science of journal article publication. The overall structure generally matches the curriculum of a graduate course and each chapter features a learning sequence based on Daniel Kahneman's intuitive judgement theory. The volume analyzes the intuitive thoughts of new authors from a variety of countries, uses over fifty real-life cases, and focuses on core concepts from nearly 100 research articles. It provides scientific advice for new authors, junior researchers, and graduate students to publish their scholarly work and advance their academic careers.

America is a mobile nation and frequent relocation is a way of life for many corporate families. This qualitative review of literature relating to the sociological impact of relocation on the corporate family appears to show that relocation has short-term and long-term implications for the family system. Relocation is not an isolated event but a process of adjustment over time involving emotional stages similar to the stages of grief and loss. Each family member may experience the relocation differently and progress through the stages at a different rate.

This creates a period of disorganization and disorientation for the family similar to a prolonged jet-lag, which I call Relo-Lag™. This period of adjustment for the family system is the most frequently cited short-term effect and can last up to two years. Frequent relocations may also precipitate a long-term effect by causing the family system to become too tightly closed. The family may not seek outside help when needed or accept it when offered. Individual family members may experience difficulty with long-term close friendships and relationships outside the family. In addition, children appear to be particularly vulnerable when relocating during the individuation stages, years 3-5 and adolescence, years 13-16. Not all families experience relocation negatively and some families cope well with relocation. Relocation can improve career and financial opportunities for some corporate families, but there may be emotional costs that need to be considered before making a decision to relocate. *Relo-Lag is a Trademark of Barbara W.
