Laboratory Manual for Anatomy & Physiology Featuring Martini Art, Cat Version, Books a la Carte Edition

This is a lab manual for a college-level human anatomy course. Mastery of anatomy requires a fair amount of memorization and recall skills. The activities in this manual encourage students to engage with new vocabulary in many ways, including grouping key terms, matching terms to structures, recalling definitions, and written exercises. Most of the activities in this manual utilize anatomical models, and several dissections of animal tissues and histological examinations are also included. Each unit includes both pre- and post-lab questions and six lab exercises designed for a classroom where students move from station to station. The vocabulary terms used in each unit are listed at the end of the manual and serve as a checklist for practicals.

updated art program, and new "active learning" features that help allied health students better visualize and understand the structure and function of the human body. Elaine Marieb's clear and friendly writing style emphasizes the relevance of anatomy and physiology to students' lives and careers. It clarifies concepts, defines key terms, and offers just the right balance of anatomy, physiology, and clinical coverage to make the content complete without being overwhelming. While many authors merely condense a two-semester text to meet a one-semester need, Elaine Marieb wrote this book specifically for the one-semester course and continues to carefully select a range of material that proves just right for the shorter course. New information on hot topics like DNA fingerprinting, contraception, stem cell research, and obesity draws students into the material, while a flexible topic structure allows instructors to choose a chapter sequence to meet virtually any need.
