General Biology I Laboratory Manual

Integrating Lecture and Lab: A General Biology Laboratory Manual is designed for biology majors and can be used in conjunction with many different lower-division biology textbooks. The user-friendly manual encourages students to think of lecture and lab as a cohesive unit by requiring them to use the information they are learning in lecture and the material presented in the manual, including standard experiments, to complete assignments. Laboratory topics include prokaryotes,

protists, land plants, fungi, animals, digestion, blood and circulation, reproduction, and the nervous system. Because classification of organisms can vary among textbooks, many formal taxa have been eliminated from this manual, making it usable with a variety of lower division biology texts. Classroom tested, Integrating Lecture and Lab helps biology students successfully apply information they learn in their lectures. Leslie A. King earned her M.A. in physiology from San Francisco State University and is instructor of biology at the University of San Francisco, where she teaches courses in general biology, human physiology, and comparative animal physiology. Her writing draws upon over 25 years of teaching experience as well as supervising undergraduate biology laboratory sections and laboratory instructors.

General Biology Laboratory Manual

This lab manual is intended to accompany the General Biology II course at Southwest Tennessee Community College. This course focuses on the evolution and diversity of living organisms with attention to comparative anatomy within the vertebrate animals. The manual contains instructions for hands-on examination of specimens with minimal repetition of content found in the recommended textbook (Biology. Solomon and Berg, current edition). This format is used with the motive of saving costs for the student and encouraging the use of the text and the instructor's assistance for explaining unfamiliar vocabulary. In addition to the illustrations in this manual, students may also find photographs and anatomical diagrams of the subjects on the internet as well as in the textbook "

Laboratory Manual for General Biology

Integrating Lecture and Lab: A General Biology Laboratory Manual is designed for students majoring in Biology, and can be used in conjunction with many different lower-division biology textbooks. The user-friendly manual encourages students to think of lecture and lab as a cohesive unit. This is accomplished by requiring them to use the information they are learning in lecture and the material presented in the manual, including standard experiments, to complete assignments. One half of the manual covers taxonomy and the other half is devoted to introductory comparative physiology. Because classification of organisms can vary from textbook to textbook, many formal taxa have been eliminated from this manual. Students complete taxonomy assignments based on information they receive in class lectures and from their lecture textbook, which is what makes this manual usable with a variety of lower-division biology texts in a variety of general biology courses. Adopting professors will receive a laboratory preparation guide and a question-and-answer teaching edition of the manual. Classroom tested, Integrating Lecture and Lab helps biology students successfully apply information they learn in their lectures. Leslie A. King (M.A., Physiology, San Francisco State University) is an Instructor of Biology at the University of San Francisco, where she teaches Human Physiology and has taught both General Biology lecture and lab courses. In writing Integrating Lecture and Lab: A General Biology Laboratory Manual, she also drew upon over 17 years of experience in supervising and coordinating undergraduate Biology laboratory sections and laboratory instructors.
