Advocated (and attacked) by commentators across the political spectrum, paying every citizen a basic income regardless of their circumstances sounds utopian. However, as our economies are transformed and welfare states feel the strain, it has become a hotly debated issue. In this compelling book, Louise Haagh, one of the world's leading experts on basic income, argues that Universal Basic Income is essential to freedom, human development and democracy in the twenty-first century. She shows that, far from being a silver bullet that will transform or replace capitalism, or a sticking plaster that will extend it, it is a crucial element in a much broader task of constructing a democratic society that will promote social equality and humanist justice. She uses her unrivalled knowledge of the existing research to unearth key issues in design and implementation in a range of different contexts across the globe, highlighting the potential and pitfalls at a time of crisis in governing and public austerity. This book will be essential reading for anyone who wants to get beyond the hype and properly understand one of the most important issues facing politics, economics and social policy today.

## **Lakhmir Singh's Science for Class 8**

This monograph examines the nature of active learning at the higher education level, the empirical research on its use, the common obstacles and barriers that give rise to faculty resistance, and how faculty and staff can implement active learning techniques. A preliminary section defines active learning and looks at the current climate surrounding the concept. A second section, entitled "The Modified Lecture" offers ways that teachers can incorporate active learning into their most frequently used format: the lecture. The following section on classroom discussion explains the conditions and techniques

needed for the most useful type of exchange. Other ways to promote active learning are also described including: visual learning, writing in class, problem solving, computer-based instruction, cooperative learning, debates, drama, role playing, simulations, games, and peer teaching. A section on obstacles to implementing active learning techniques leads naturally to the final section, "Conclusions and Recommendations," which outlines the roles that each group within the university can play in order to encourage the implementation of active learning strategies. The text includes over 200 references and an index. (JB)
