In warzones, ordinary commercially-available drones are used for extraordinary reconnaissance and information gathering. They can also be used for

bombings - a drone carrying an explosive charge is potentially a powerful weapon. At the same time asymmetric warfare has become the norm - with large states increasingly fighting marginal terrorist groups in the Middle East and elsewhere. Here, Nicholas Grossman shows how we are entering the age of the drone terrorist - groups such as Hezbollah are already using them in the Middle East. Grossman will analyse the ways in which the United States, Israel and other advanced militaries use aerial drones and ground-based robots to fight non-state actors (e.g. ISIS, al Qaeda, the Iraqi and Afghan insurgencies, Hezbollah, Hamas, etc.) and how these groups, as well as individual terrorists, are utilizing less advanced commercially-available drones to fight powerful state opponents. Robotics has huge implications for the future of security, terrorism and international relations and this will be essential reading on the subject of terrorism and drone warfare.

Meet Monique! In this true story, online phenomenon Guirec Soudée shares his adventures both unbelievable and heartwarming, sailing around the world with his brave, affectionate red hen, Monique. Monique is a highly accomplished chicken: she surfs, she skateboards, and she just crossed the world on a tiny boat with her human companion, Guirec, who

helped steer. On their three-year journey, together they were unstoppable. When they became stranded in the ice off Greenland for four months, Monique, unruffled as always, kept Guirec alive with her eggs-- and they both made it home. Guirec and Monique are irresistible as unlikely comrades and friends taking on the world, and Guirec documented their journey with his remarkable, comical photographs. A deeply touching portrait of the real-life bond between animals and the humans who love them as well as a thrilling survival story, *The Hen Who Sailed Around the World* is an adventure for the ages.

Exemplary stories of innovation from around the world In an age of rising inequality, getting a good

education increasingly separates the haves from the have nots. In countries like the United States, getting a good education is one of the most promising routes to upper-middle-class status, even more so than family wealth. Experts predict that by 2030, 825 million children will reach adulthood without basic secondary-level skills, and it will take a century for the most marginalized youth to achieve the educational levels that the wealthiest enjoy today. But these figures do not even account for the range of skills and competencies needed to thrive today in work, citizenship, and life. In a world where the ability to manipulate knowledge and information, think critically, and collaboratively solve problems are essential to thrive, access to a quality education is crucial for all young people. In *Leapfrogging Inequality*, researchers chart a new path for global education by examining the possibility of leapfrogging—harnessing innovation to rapidly accelerate educational progress—to ensure that all young people develop the skills they need for a fast-changing world. Analyzing a catalog of nearly 3,000 global education innovations, the largest such collection to date, researchers explore the potential of current practices to enable such a leap. As part of this analysis, the book presents an evidence-based framework for getting ahead in education, which it grounds in the here-and-now by narrating exemplary stories of innovation from around the world. Together, these stories and resources will inspire educators, investors, leaders of nongovernmental organizations, and policymakers alike to rally around a new vision of educational progress—one that ensures we do not leave yet another generation of young people behind.

This examination of al-Qaeda's decline since the 9/11 attacks focuses on the terror organization's mutation and fragmentation. It looks at its partnership with the local and regional jihadist networks that played a pivotal role in the Madrid, London, and Fort Hood

attacks, arguing that, although initially successful, such alliances actually unraveled following both anti-terror policies and a growing rejection of violent jihadism in the Muslim world. Challenging conventional theories about al-Qaeda and homegrown terrorism, the book claims that jihadist attacks are now organized by overlapping international and regional networks that have become frustrated in their inability to enforce regime change and their ideological goals. The discussion spans the war on terror, analyzing major post 9/11 attacks, the failed jihadist struggle in Iraq, al-Qaeda's affiliates, and the organization's future prospects after the death of Osama Bin Laden and the Arab Spring. This assessment of the future of the jihadist struggle against Muslim governments and homegrown Islamic terrorism in the West will be an invaluable resource to anyone studying terrorism and Islamic extremism.

"This path-breaking study is about how ordinary people are gaining the means to be extraordinarily

lethal. States are also concentrating their technological power, but their gains lag behind a shift in relative capacity that is already disrupting the role of conventional armed forces. The dispersal of emerging technologies such as robotics, cyber weapons, 3-D printing, autonomous systems, and various forms of artificial intelligence is widening popular access to unprecedented destructive power. Based on hard lessons from previous waves of lethal technology such as dynamite and the assault rifle, the book explains what the future may hold and how we should respond"--

This book fills a clear gap in the literature for a technically-focused book covering nuclear proliferation and related issues post-9/11. Using a concept-led approach which serves a broad readership, it provides detailed overview of nuclear weapons, nuclear proliferation and international nuclear policy. The author addresses topics including offensive and defensive missile systems, command and control, verification, weapon effects, and nuclear testing. A chronology of nuclear arms is presented including detailed discussion of the Cold War,

proliferation, and arms control treaties. The book is tailored to courses on nuclear proliferation, and the general reader will also find it a fascinating introduction to the science and strategy behind international nuclear policy in the modern era.

Since the appearance of the first science fiction magazine in 1926, thousands of short stories have been published in periodicals devoted to the genre. These stories cover a wide range of subjects, from spacecraft to the human condition, and feature little-known authors as well as masters like Ellison and Asimov. In the past, finding which issue of what magazine ran a certain story was nearly impossible. This much-needed reference tool provides valuable assistance in the daunting task of locating short stories published in science fiction magazines, providing exhaustive indexes to magazines, authors, and titles, allowing a variety of options for research on 34,000 stories appearing in nearly 5,000 issues of 133 genre magazines. Stories from all major American publications, as well as from several minor periodicals, are indexed. Also included is an appendix of the best known and most prolific contributors, giving the titles of all their stories in this work (necessary because the huge author index does not show titles). A guide to how to use this book clarifies its features for the researcher.

This open access book disseminates some of the results of the European H2020 AiRT Project (Technology transfer of RPAs for the creative industry). In particular, it presents findings related to mitigating safety and security concerns when civil drones are piloted by the service sector (mainly, the creative industry). European policies regarding drones generally focus on outdoor drones, but they are also used indoors. Moreover, a number of European countries have fragmented regulations on drone use, and as a result, European institutions are attempting address these issues. This work is based on a detailed study of the European policies, a comparative analysis of the regulation in various European countries, an analysis of the drone sector in Europe, and primary data from members of the creative industry. The authors created focus groups in Spain, the UK and Belgium in order to discuss with the creative industry the concerns on safety and security when using civil drones for their work. Based on these results, the book offers advice to the European industry, as well as new insights for academics and policymakers.

A comprehensive introduction to the AI approach to

robotics, combining theoretical rigor and practical applications; with case studies and exercises. This text covers all the material needed to understand the principles behind the AI approach to robotics and to program an artificially intelligent robot for applications involving sensing, navigation, planning, and uncertainty. Robin Murphy is extremely effective at combining theoretical and practical rigor with a light narrative touch. In the overview, for example, she touches upon anthropomorphic robots from classic films and science fiction stories before delving into the nuts and bolts of organizing intelligence in robots. Following the overview, Murphy contrasts AI and engineering approaches and discusses what she calls the three paradigms of AI robotics: hierarchical, reactive, and hybrid deliberative/reactive. Later chapters explore multiagent scenarios, navigation and path-planning for mobile robots, and the basics of computer vision and range sensing. Each chapter includes objectives, review questions, and exercises. Many chapters contain one or more case studies showing how the concepts were implemented on real robots. Murphy, who is well known for her classroom teaching, conveys the intellectual adventure of mastering complex theoretical and technical material. An Instructor's Manual including slides, solutions, sample tests, and programming assignments is available to qualified professors who are considering using the book or who are using the book for class use.
