An in-depth examination of US arms exports: not only the who and how but, the why and why not. Excellent reference material for the layman, political scientist, or military professional. The three authors are or have been connected with the Investor Responsibility Research Center. Extensive references. No index. Annotation copyrighted by Book News, Inc., Portland, OR

AIAA/ASME/SAE/ASEE 24th Joint Propulsion Conference

Publisher's Note: Products purchased from Third Party sellers are not guaranteed by the publisher for quality, authenticity, or access to any online entitlements included with the product. The most comprehensive guide to aircraft powerplants—fully updated for the latest advances This authoritative textbook contains all the information you need to learn to master the operation and maintenance of aircraft engines and achieve FAA Powerplant certification. The book offers clear explanations of all engine components, mechanics, and technologies. This ninth edition has been thoroughly revised to include the most current and critical topics. Brand-new sections explain the latest engine models, diesel engines, alternative fuels, pressure ratios, and reciprocating and turbofan engines. Hundreds of detailed diagrams and photos

illustrate each topic. Aircraft Powerplants, Ninth Edition covers:

- Aircraft powerplant classification and progress
- Reciprocating-engine construction and nomenclature
- Internal-combustion engine theory and performance
- Lubricants and lubricating systems
- Induction systems, superchargers, and turbochargers
- Cooling and exhaust systems
- Basic fuel systems and carburetors
- Fuel injection systems
- Reciprocating-engine ignition and starting systems
- Operation, inspection, maintenance, and troubleshooting of reciprocating engines
- Reciprocating engine overhaul practices
- Principal parts, construction, types, and nomenclature of gas-turbine engines
- Gas-turbine engine theory and jet propulsion principles
- Turbine-engine lubricants and lubricating systems
- Ignition and starting systems of gas-turbine engines
- Turbofan, turboprop, and turboshaft engines
- Gas-turbine operation, inspection, troubleshooting, maintenance, and overhaul
- Propeller theory, nomenclature, and operation
- Turbopropellers and control systems
- Propeller installation, inspection, and maintenance
- Engine indicating, warning, and control systems

Because of the important national defense contribution of large, non-fighter aircraft, rapidly increasing fuel costs and increasing dependence on imported oil have triggered significant interest in increased aircraft engine efficiency by the U.S. Air Force. To help address this need, the Air Force asked the National Research Council (NRC) to examine and assess technical options for improving engine efficiency of all large non-fighter aircraft under Air Force command. This report presents a review of current Air Force fuel consumption patterns; an analysis of previous programs designed to replace aircraft engines; an examination of proposed engine modifications; an assessment of the potential impact of alternative fuels and engine science and technology programs, and an analysis of costs and funding requirements.
