THERE'S A BIG LIFE AHEAD OF HER. CAN SHE FIND THE COURAGE TO LIVE IT? Emma is twenty-six -- pretty, intelligent, and happily living with her childhood sweetheart John in a cute little Dublin apartment. Her biggest problem is that her mother won't stop nagging her to get married already. Emma and John feel like the perfect couple, their future alive with possibilities. But out of the blue, a tragedy throws her life into disarray -- and Emma is suddenly, incomprehensibly, alone. As she emerges from grief, Emma has to find a whole new way of living, and her loyal friends rally round in an attempt to help. Clodagh, Emma's lifelong friend, with whom she's shared everything from mud pies to dating disasters. Anne and Richard, more-or-less happily married and debating a move to the country. Emma's brother Noel, the young Catholic priest, finding his own faith tested even as he tries to comfort Emma. Seán, the gorgeous bad boy of a thousand one-night stands, uncomfortably aware of his and Emma's growing connection. Witty, acerbic, and sometimes downright shocking, Emma documents the stories of her friends and her own recovery from grief with a candor that engages the reader from the very first page. With an amazing insight into the power of friendship and a wry, irreverent humor that considers no subject off-limits, talented new Irish writer Anna McPartlin tells a heartwarming story of the courage it takes to move past loss and learn to live.

"I'm following them," Aeron answered. "And?" "I'll have a perfect shot on her," he said. "Good," was the reply. "How did you want it?" "Two in the chest," he answered. "The others were sloppy. Lassoed by Fortune

What was the world like for people thousands of years ago? How can we know? Through fiction? This is a work of literary criticism, and more. It begins with a discussion of the problem of authenticity and then considers twelve pieces of fiction that depict human prehistory: H.G. Wells' *The Island of Doctor Moreau*, Pierre Boule's *The Planet of the Apes*, Jules Verne's *The Village in the Treetops*,

Edgar Rice Burroughs' *The Land That Time Forgot*, the struggle for legitimacy in Wells' "The Grisly Folk," the Tasmanian analogue in Lester Del Rey's "The Day Is Done," William Golding's *The Inheritors*, "the promise of humanity" in Arthur C. Clarke's *2001: A Space Odyssey*, the theme of "a god among the heathen" in Wells' "The Lord of the Dynamos" and other works, Jean Auel's *The Clan of the Cave Bear*, J.H. Rosny-Aîné's *Quest for Fire*, and Wells' *The Time Machine: An Invention*. A final chapter considers the paleoanthropologist as literary critic.

Just as with his remarkable military novels, millions of readers have been captured by the rich characters and vivid realism of W. E. B. Griffin's police dramas. "Griffin has the knack," writes *The Philadelphia Inquirer*. He "sets his novel before you in short, fierce, stop-for-nothing scenes. Before you know it, you've gobbled it up." Now, in *Final Justice*, Detective Matt Payne of the Philadelphia police department—newly promoted to sergeant and assigned to Homicide—finds himself in the middle of three major assignments. The first case, a fatal shooting at a fast-food restaurant, seems simple, but rapidly becomes complicated. The second, a rape that tumbled into murder, begins complicated and only gets more so, as it becomes apparent that the crime may be part of a disturbing, and escalating, pattern. The third is the most bizarre, as Payne becomes involved with a local figure who long ago fled the country, leaving behind the mummified body of his girlfriend in a trunk. Ever since, the murderer has been sending taunting postcards from his safe haven—but all that may be about to change. Weaving in and around this already hectic schedule are the visit to Philadelphia of the self-absorbed star of a series of improbable police movies, who wants Payne to show him "the real stuff," and the appearance in Payne's life of two very different women. Either one of them alone would be enough to set his head spinning, but together . . . this might be the most complicating thing of all. Filled with color and detail and plots as real as the headlines, this is a riveting novel of the men and women who put their lives on the line, from the cop on the beat to the commissioner himself. It's a story of fears, dangers, courage, loyalty, and genuine heroism: storytelling at its best.

A radical reinterpretation of early American history from a native point of view In *Masters of Empire*, the historian Michael McDonnell reveals the pivotal role played by the native peoples of the Great Lakes in the history of North America. Though less well known than the Iroquois or Sioux, the Anishinaabeg who lived along Lakes Michigan and Huron were equally influential. McDonnell charts their story, and argues that the Anishinaabeg have been relegated to the edges of history for too long. Through remarkable research into 19th-century Anishinaabeg-authored chronicles, McDonnell highlights the long-standing rivalries and relationships among the great tribes of North America, and how Europeans often played only a

minor role in their stories. McDonnell reminds us that it was native people who possessed intricate and far-reaching networks of trade and kinship, of which the French and British knew little. And as empire encroached upon their domain, the Anishinaabeg were often the ones doing the exploiting. By dictating terms at trading posts and frontier forts, they played a crucial role in the making of early America. Through vivid depictions of early conflicts, the French and Indian War, and Pontiac's Rebellion, all from a native perspective, *Masters of Empire* overturns our assumptions about colonial America and the origins of the Revolutionary War. By calling attention to the Great Lakes as a crucible of culture and conflict, McDonnell reimagines the landscape of American history.

My looks are average, I don't have any superpowers, no one's showing up to tell me I'm a princess—you get the picture. But when my junior year started, something not normal happened. There were new kids at school . . . new kids with a wardrobe straight out of a 19th-century romance novel, and an inexplicable desire to stay at school until sundown. And on top of that, James Hallowell showed up. James, who stole my sandwiches in fourth grade and teased me mercilessly through middle school. James, who now seems to have the power to make my heart race any time he comes near. But something weird is going on. Because James rarely goes out during the day. And he seems stronger than your typical guy. And he knows the new kids, all of whom seem to be harboring some kind of deep secret. . . .

AQA A Level Business 2 Third Edition (Wolinski & Coates)

The growth of the Internet and the availability of enormous volumes of data in digital form have necessitated intense interest in techniques to assist the user in locating data of interest. The Internet has over 350 million pages of data and is expected to reach over one billion pages by the year 2000. Buried on the Internet are both valuable nuggets to answer questions as well as a large quantity of information the average person does not care about. The Digital Library effort is also progressing, with the goal of migrating from the traditional book environment to a digital library environment. The challenge to both authors of new publications that will reside on this information domain and developers of systems to locate information is to provide the information and capabilities to sort out the non-relevant items from those desired by the consumer. In effect, as we proceed down this path, it will be the computer that determines what we see versus the human being. The days of going to a library and browsing the new book shelf are being replaced by electronic searching the Internet or the library catalogs. Whatever the search engines return will constrain our knowledge of what information is available. An understanding of Information Retrieval Systems puts this new environment into perspective for both the creator of documents and the consumer trying to locate information.

The Final Silence

"In the last ten years, the United States—the most powerful and technically advanced society in human history—has been confronted by a series of ominous, seemingly intractable crises. First there was the threat to the environmental survival; then there was the apparent shortage of energy; and now there is the unexpected decline of the economy. These are usually regarded as separate afflictions, each to be solved in its own terms: environmental degradation by pollution controls; the energy crisis by finding new sources of energy and new ways of conserving it; the economic crisis by manipulating prices, taxes, and interest rates. But each effort to solve one crisis seems to clash with the solution of the others—pollution control reduces energy supplies; energy conservation jobs. Inevitably, proponents of one solution become opponents of the others. Policy stagnates and remedial action is paralyzed, adding to the confusion and gloom that beset the country." So opens Barry Commoner's *The Poverty of Power*, the book in which America's great biologist and environmentalist addresses himself to the central question of our day. He concludes that "what confronts us is not a series of separate crises, but a single basic deficit—a fault that lies deep in the design of modern society. This book is an effort to unearth that fault, to trace its relation to the separate crises, and to consider what can be done to correct it at its root."

Chapter 1 places into perspective a total Information Storage and Retrieval System. This perspective introduces new challenges to the problems that need to be theoretically addressed and commercially implemented. Ten years ago commercial implementation of the algorithms being developed was not realistic, allowing theoreticians to limit their focus to very specific areas. Bounding a problem is still essential in deriving theoretical results. But the commercialization and insertion of this technology into systems like the Internet that are widely being used changes the way problems are bounded. From a theoretical perspective, efficient scalability of algorithms to systems with gigabytes and terabytes of data, operating with minimal user search statement information, and making maximum use of all functional aspects of an information system need to be considered. The dissemination systems using persistent indexes or mail files to modify ranking algorithms and combining the search of structured information fields and free text into a consolidated weighted output are examples of potential new areas of

investigation. The best way for the theoretician or the commercial developer to understand the importance of problems to be solved is to place them in the context of a total vision of a complete system. Understanding the differences between Digital Libraries and Information Retrieval Systems will add an additional dimension to the potential future development of systems. The collaborative aspects of digital libraries can be viewed as a new source of information that dynamically could interact with information retrieval techniques.

Clinical Anatomy by Regions

James Hitchcock gives an extraordinarily incisive analysis of the liturgical abuse and destructive liturgical reforms brought about by professional liturgists and other "experts" over the last thirty years. Hitchcock chronicles the havoc wreaked by modern liturgists who abandoned the noble purposes of the classical (pre-1965) Liturgical Movement whose aim was to deepen people's appreciation of the inexhaustible mystery of the liturgy by elevating the practice of the liturgy to incorporate neglected riches of earlier centuries, especially the Patristic Age. Instead of seeking a deeper understanding of the great traditions of the Church through the ages, liturgists have sought "relevance" by means of continued adaptation to contemporary culture. Hitchcock reveals how the tendency toward a desacralized liturgy has had the most profound effects on the whole life of the Church, as well as society. One's basic approach to liturgy is likely to be both a reflection and a catalyst to a whole range of values and beliefs. As Hitchcock states, "It is impossible to change basic symbols and rituals without also changing the life of the society whose symbols and rituals they are."

This text presents a theoretical and practical examination of the latest developments in Information Retrieval and their application to existing systems. By starting with a functional discussion of what is needed for an information system, the reader can grasp the scope of information retrieval problems and discover the tools to resolve them. The book takes a system approach to explore every functional processing step in a system from ingest of an item to be indexed to displaying results, showing how implementation decisions add to the information retrieval goal, and thus providing the user with the needed outcome, while minimizing their resources to obtain those results. The text stresses the current migration of information retrieval from just textual to multimedia, expounding upon multimedia search, retrieval and display, as well as classic and new textual techniques. It also introduces developments in hardware, and more importantly, search architectures, such as those introduced by Google, in order to approach scalability issues. About this textbook: A first course text for advanced level courses, providing a survey of information retrieval system theory and architecture, complete with challenging exercises Approaches information retrieval from a practical systems view in order for the reader to grasp both scope and solutions Features what is achievable using existing technologies and investigates what deficiencies warrant additional exploration
